PUNITH B

Bangalore, India | +91 9611179873 | 34punithb@gmail.com | github.com/34dexter | 34dexter.github.io/portfolio

PROFESSIONAL SUMMARY

Electronics and Communication Engineering graduate with project experience in machine learning, deep learning, front-end web development, and embedded systems. Worked with Python, scikit-learn, TensorFlow, Keras, HTML, CSS, JavaScript, and Arduino on projects covering cardiac arrhythmia prediction, bone cancer prediction from medical images, an event-planner website, and a dual-axis solar tracker.

TECHNICAL SKILLS

- **Programming and Web:** Python, HTML, CSS, JavaScript
- **Machine Learning and Deep Learning:** Random Forest, Deep Neural Networks (DNN), VGG16, scikit-learn, TensorFlow, Keras
- **Data Analysis and Visualization:** NumPy, Matplotlib
- **Embedded Systems:** Arduino, Arduino IDE, LDR sensors, servo motors
- **Tools:** Visual Studio Code, Jupyter Notebook, Microsoft Office

EXPERIENCE

Machine Learning Intern | Take It Smart (OPC) Pvt. Ltd.
Project: Cardiac Arrhythmia Prediction Using Random Forest

- Built a machine learning model in Python to predict cardiac arrhythmia.
- Trained the model on datasets imported through scikit-learn.
- Applied the Random Forest algorithm for classification and prediction.
- Used NumPy for numerical computation and Matplotlib for data visualization.

Sports Analyst | Hudl India

- Worked as a Sports Analyst for three months.

PROJECTS

Bone Cancer Prediction Using Deep Neural Networks (Final-Year Project)
Technologies: Python, TensorFlow, Keras, Jupyter Notebook

- Developed a deep learning model to predict bone cancer from immunohistochemistry (IHC) images.
- Pre-processed IHC images and extracted features using a DNN with the VGG16 model.
- Performed detection by comparing the extracted feature values.

Dual-Axis Solar Tracker (Mini Project)
Technologies: Embedded Systems, Arduino, Arduino IDE, LDR sensors, servo motors

- Designed a solar panel system that detects the direction of the most intense sunlight and automatically aligns itself towards it.
- Used LDR sensors for light detection and servo motors for two-axis movement, controlled by an Arduino.
- Improved energy capture compared with a fixed, stationary solar panel.

Event Planner Website (Front-End)
Technologies: HTML, CSS, JavaScript

- Built the front end of a website for an event planner using HTML, CSS, and JavaScript.
- Live site: https://34dexter.github.io/Eventrra._/

EDUCATION

Bachelor of Engineering (BE), Electronics and Communication Engineering
Rajarajeswari College of Engineering, Bangalore | 2023

LANGUAGES

English, Kannada, Hindi
